Microblog, Thanksgiving Break: I loved the creative ways we can tell story through dining experiences!

Such as the amazing teamLab experience at Ginza and the popup intimate cafe at Blue Bottle

"The Studio is our answer to this question: How hard can we work to reveal the essential nature of an extraordinary coffee and present it to a handful of guests in a modest room?"

JAMES FREEMAN
BLUE BOTTLE FOUNDER

Mikey: Soooooooo why can't we have this same experience at home?

RECALL THE GOOD 'OL TIMES:
IPADS BECAME LEGAL AT BARISTA CHAMPIONSHIPS

Microblog, 12/03: I was a bit stuck here on really defining the prototype! I sought inspiration by also looking at coffee experiences in the past!

Microblog, 12/06: Back in my competitive barista era, iPads and other digital interfaces were now allowable during the presentation/judging!

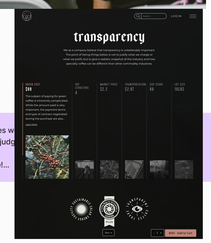
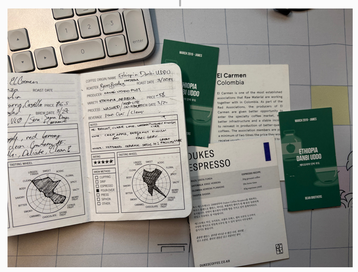
Tell the same amazing stories w championship judg

Home!...



Information Cards, Digitally!

Desk view and image recognition opens up a lot of opportunity at the desk!!!



BTW: This is EXACTLY what we tell judges at competion!

Origin: Where did this coffe come from (producer)

Process to make the coffee?

What are the flavor notes you are tasting??

Closing thoughts - what made that coffee special? What is a takeaway from the producer and coffee?

Use Desk View on Mac

You can use Desk View with FaceTime and other apps to show your face and an overhead view of your desk at the same time.

Note: Desk View is only available on Apple Studio Display, Mac computers with the 12MP Center Stage camera, and when using your iPhone as a webcam with iPhone 11 or later, excluding iPhone SE.

1. Go to an app that captures video on your Mac.

   If you're using your iPhone as a webcam, attach your iPhone to your Mac with a stand accessory.

2. Click in the menu bar, then click Desk View.

   Desk View opens, which mimics an overhead camera and shows a top-down view of your desk.

   ou can also click the Desk View button in the top-right corner of

   ding your desk with the camera. To zoom in or out, drag the

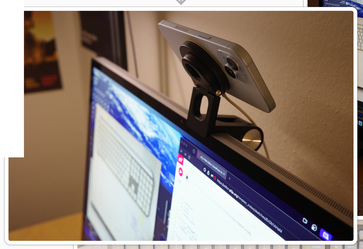
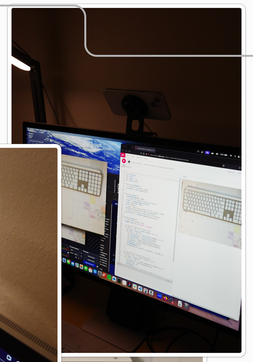
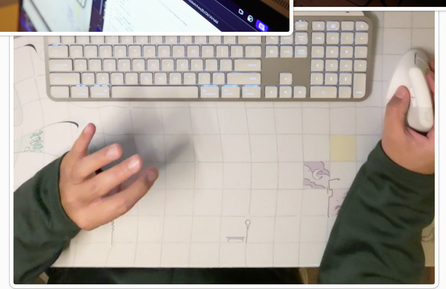
Even Customer Service is perplexed.

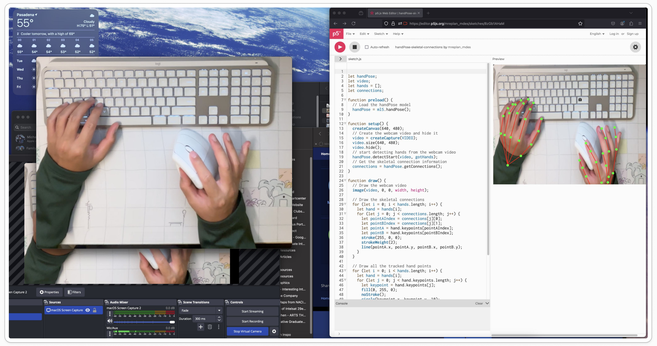
Microblog, 12/01: Apparently Studio Display DOES NOT have desk view! I had to improvise by mounting my iPhone and use Continuity + Desk View via my iPhone's fisheye to get the same effect!







Microblog, 12/01: Another hurdle was finding a way to make Desk View video an input into P5js. Desk View is a separate app and doesn't count as a "webcam" input.

So what I did here was use OBS and setup a virtual webcam that takes Desk View application as input and output that as a stream!


And that it works with an example hand detection ml5js!
